

Public Health Quality Indicators

Annual Report / July 2016

Foreword

July 1, 2016

Dear Local Health Departments, Public Health Stakeholders and Other Interested Parties:

The Ohio Department of Health (ODH) and the Association of Ohio Health Commissioners (AOHC) are pleased to submit for your consideration the 2016 report for the public health quality indicators.

The intent of this report is to satisfy the requirement in the Ohio Revised Code (ORC) 3701.98 for the sharing of data reported for the public health quality indicators with payers, providers, general and city health districts, and public health professionals. The report includes an overview of the indicators, general conclusions and several appendices outlining data for each local health department.

This is the second year (first full calendar year) data has become available for rules established in the Ohio Administrative Code (OAC) 3701-36-05. This report should be considered a status update for the public health quality indicators data to show the progress from the baseline data that was used in the initial 2015 annual report. Additional information, including rule advisory committee work, ODH guidance, reporting resources and links to additional information can be found on the ODH website at <http://www.odh.ohio.gov/localhealthdistricts/Futures/Quality%20Indicators.aspx>.

As always, we would like to thank the collaborative efforts of everyone involved for giving of their time to participate in this unprecedented effort. We look forward to the ongoing collaboration with our public health partners as we continue to align state and local efforts to improve the health of all Ohioans.

Sincerely,

Richard Hodges
Director, Ohio Department of Health

James Watkins
President, Association of Ohio Health Commissioners

Overview

ORC 3701.98 required ODH to establish (A) a standardized process by which all general and city health districts shall collect and report to the director information regarding public health quality indicators and (B) a policy and procedures for the sharing of health data reported under this section with payers, providers, general and city health districts, and public health professionals. ORC also requires rules be created for the public health quality indicators by ODH in conjunction with AOHC in identifying the public health quality indicators.

ODH, AOHC and other stakeholders developed an advisory committee for the purposes of developing rules, meeting 16 times between August 2013 and March 2014. Ohio Administrative Code (OAC) 370136-05¹ became effective July 1, 2014 and provides rules for local health departments outlining:

- Fourteen public health quality indicators
- Information to be submitted to ODH on an annual basis
- How ODH will publish information related to the quality indicators

ODH subsequently released administrative guidance on December 31, 2014 to local health departments for the collection and reporting of information related to the public health quality indicators.

Indicators selected by the rule advisory committee were intended to represent the broad spectrum of work done by local health departments to improve public health. The committee used several considerations when selecting the public health quality indicators, including but not limited to:

- Type–Outcome, Capacity, Practice
- Meaningfulness
- Comparability
- Availability of Data
- Alignment with State Performance Standards

The public health quality indicators include two out-come related measures, eight related to capacity and four related to practice or process. This report provides a state-level description of the data by indicator and offers general conclusions.

¹<http://codes.ohio.gov/oac/3701-36-05>

Outcome Indicators

There are two quality indicators that specifically address and track public health outcomes by health jurisdiction.

- Infant mortality rate by race.
- Increasing the percentage of children entering kindergarten who are fully vaccinated.

Data for infant mortality is available on Ohio's Network of Care-Public Health Assessment and Wellness website for each local health department by perinatal region.² In addition to the six perinatal regions, infant mortality rates by race are also displayed at the local health department level when the rate is considered reliable and stable. The Network of Care site tracks key public health indicators at the state and local levels. See **Figure 1**.

Statewide immunization data submitted by schools is available in the ODH secure Public Health Data Warehouse for review and analysis by local health departments. Immunization rates have not been determined for each local health department jurisdiction. Local health departments are encouraged to partner with school districts to increase immunization rates through collaboration, education, outreach and reporting efforts.

Reducing infant mortality and increasing immunization rates are priority health issues at the state and local levels. Expanded reporting and sharing of data in both areas demonstrates a commitment to identify disparities, trends and opportunities to improve outcomes across the state.

Figure 1

Capacity Indicators

There are six quality indicators that address a local health department's capacity and ability to meet a set of standards and expectations of accessing data, epidemiology, emergency response, environmental health, information technology and access to healthcare. The following list of quality indicators is outlined by health department marked with "yes" for those meeting reporting expectations. See **Appendix 1**.

- Access to birth and death records: measured by the access and usage of the secure Ohio Public Health Data Warehouse.
- Ability to receive and respond within one hour to an emergency preparedness on-call drill initiated by the department of health, twenty-four hours per day, seven days per week.
- Meeting the annual required inspection frequency and providing verification of registered sanitarian or sanitarian-in-training conducting inspections for food safety, public swimming pools and campground programs.
- Participation in the Medicaid Administrative Claiming program to promote access to healthcare.
- Expanding the use of electronic data management systems in the administration of public health programs (e.g., clinical, environmental and/or administration).
- Demonstrating one full-time equivalent epidemiologist per 300,000 population.

There are two quality indicators related to completeness and timeliness for nine reportable diseases identified in OAC 3701-36-05(B) (2). See **Appendix 2**.

- Meeting the median number of days between date of diagnosis and report to the health department in the Ohio Disease Reporting System.
- Increasing the percent completeness for reportable infectious diseases in the Ohio Disease Reporting System by age, race, ethnicity, and gender.

A subset of reportable diseases were identified by the advisory committee as having the most value and opportunity to impact public health related to improved timeliness and completeness of reporting. The reporting lag is the difference in days between the date of diagnosis and the date of report. Weekends were removed in the median lag calculation and only confirmed and probable cases were included in the analysis. ODH used the date that the record was created in Ohio Disease Reporting System as a proxy for date of report. With very few exceptions, that date is the same day that the local health department was notified (via Electronic Lab Reporting or by manual entry).

All diseases included are Class B reportable diseases with an expectation that they be reported to ODH by the next business day.³ Given this established standard, an appropriate proxy that should also be monitored to see continuous improvement is the percentage of reports (locally and aggregated at the state level) that meet or exceed the established standard.

³ <http://www.odh.ohio.gov/pdf/idcm/intro1.pdf>

Practice-Based Indicators

There are four quality indicators related to a local health department’s description of how they are addressing public health issues and programs at the local level. The practice-based quality indicators are outlined by health department and marked with a “yes” for those meeting the reporting expectations. See **Appendix 3**.

- Reporting engagement with the community (clinical and non-clinical) about policies and/or strategies that will promote the public’s health.
- Reporting of at least one evidence-based injury prevention intervention.
- Reporting of at least one evidence-based tobacco prevention or control intervention.
- Reporting of at least one evidence-based healthy eating and/or active living intervention for children birth to 18 years of age.

Information was reported by local health departments using a secure online database which provides search functionality to share and review information across the state in these program areas as illustrated in **Figure 2**. Several quality indicators assess how local health departments use evidence-based interventions for tobacco, injury and health eating/active living.⁴ Ohio’s Plan to Prevent and Reduce Chronic Disease 2014-2018 as well as other resources were shared with local health departments to align state and local efforts as well as define and promote evidence-based activities.⁵

Figure 2

The screenshot shows the 'Ohio's Health Department Profile' interface. At the top right, it says 'ODH Admin'. Below this is a navigation bar with tabs: 'Improvement Standards Status', 'Projects', 'Example Documentation', 'Quality Indicators' (which is selected), 'Manage Keywords', and 'Custom Query'. The main content area is titled 'SEARCH QUALITY INDICATOR'. It contains a 'Filter By' section with the instruction 'Select filter options below, then press enter, or click 'Filter''. There are four dropdown menus: 'Standard:' (set to 'All'), 'Keyword:' (set to 'All'), 'LHD:' (set to 'All'), and 'Year:' (set to 'All'). Below these is a text input field for 'Title & Summary Search:'. At the bottom left of the filter section is a 'Filter' button, and at the bottom right is a 'Reset' button and an 'Expand Summaries +' button.

General Conclusions

The goal of the public health quality indicators is to track progress in core public health areas and activities. Information collected, organized and gathered for this report should allow for comparative conclusions and a demonstration of quantitative progress achieved. Here are some general observations related to local health departments to inform future decisions at the state and local levels:

- Sixty percent of local health departments have access to secure public health data, an increase of approximately 3 percent.
- Ninety-six percent attest to meeting environmental health inspection frequencies and credentials, an increase of approximately 4 percent.
- In 2015, there was a 50.5 percent increase in the total number of cases reported (Appendix 2). Ninety-six percent achieved median reporting lag of five days or less for selected diseases. There has been a slight increase in the number of jurisdictions reporting cases of selected diseases within one business day, but the overall median of days to report has increased from one business day to two business days.
- Ninety-five percent of local health departments self-reported directly or partnering to provide evidence-based activities.

The next full evaluation of the public health quality indicators will be completed July 1, 2017. ODH will continue to work with local health departments to address the findings and omissions of data for each of the indicators to further the collaborative efforts between ODH and local health departments to continue improving data and outcomes. Specifically, ODH will focus on the following efforts:

- Expanding use of the Network of Care-Public Health module.
- Facilitating access and use of the Ohio Public Health Data Warehouse.
- Providing technical assistance related to evidence-based programs.

Moving forward, ODH and local health departments will continue to evaluate the reporting process and the need to improve the quality, collection and tracking of data for each of the public health quality indicators. Future work and updates will be shared on the quality indicators page of the ODH website at <http://www.odh.ohio.gov/localhealthdistricts/Futures/Quality%20Indicators.aspx>.

Local Health Department Accreditation Status

This year's report also includes a section dedicated to the status of local health department accreditation. All local health departments are required to report their accreditation status annually to ODH by March 1. Additionally during even years, local health departments are required to report the progress on 215 improvement standards and measures which are directly correlated to the Public Health Accreditation Board (PHAB) Standards and Measures. Self-reported accreditation status as of March 1, 2016 is included in **Appendix 4**. ODH is currently working on additional assessment of accreditation readiness for local health departments that will be included in the 2017 annual quality indicators report.

The screenshot shows the Ohio Department of Health website. The header includes the ODH logo, the text "Ohio Department of Health", and social media icons for Facebook, Twitter, and YouTube. A navigation bar contains links for "Forms", "Rules", "Local Health Depts", "About Us", "Data & Statistics", "Our Programs", and "Grant/Contract". Below this is a search bar and a menu with letters A-Z. The main content area is titled "Quality Indicators" and contains several sections: "Background" (with a reference to Sec. 3701.98), "(A) A standardized process by which all general and city health districts shall collect and report to the director information regarding public health quality indicators.", "(B) A policy and procedures for the sharing of health data reported under this section with payers, providers, general and city health districts, and public health professionals.", "The rules shall identify the public health quality indicators that are to be a priority for general and city health districts and the information to be collected and reported regarding those indicators. The director of health shall work in conjunction with the association of county health commissioners in identifying the public health quality indicators.", "Guidance and Resources for Local Health Departments", and "Rules for the public health quality indicators were adopted and became effective July 1, 2014. The Ohio Department of Health has developed further guidance for local health departments to assist with reporting requirements and sharing of the data." A final note states: "In addition to the guidance document, local health departments can reference additional resources related to health promotion and prevention indicators which include 'evidence based' strategies and interventions. If local health departments do not fund or lead these efforts, they may also report interventions for which they partner and promote such efforts in the community."

Quality Indicator Comparison Chart

The following table provides a comparison of the number of “Capacity Indicators” and “Practice-Based Indicators” each local health department met in 2015 and 2016. The snapshot includes the following indicators: Access to ODH Secure Data Warehouse; On-Call Drills; Environmental Inspections and Registered Sanitarian certifications; Medicaid Administrative Claiming; Expanding Information Technology; Epidemiologist FTE; Community Engagement Policies/Strategies; Evidence-Based Injury Intervention; and Health Eating/Active Living Intervention.

* Per ODH requirements in the Public Health Emergency Preparedness (PHEP) grant, each subgrantee – usually a county health department – is required to have one full-time equivalent epidemiologist per 300,000 population. Areas with county populations less than 300,000 are encouraged to share an epidemiologist. For example, six counties that each have 50,000 residents would be covered by one epidemiologist. All of Ohio's local health departments are covered by at least one epidemiologist, who might cover multiple jurisdictions.

**Niles united with Trumbull August 12, 2015.

Red text denotes fewer quality indicators meet.

State of Ohio	99.9%	99.4%	94.9%	86.2%	54.7%	2	11,190

* Diseases included confirmed and probable cases of: Campylobacteriosis, Cryptosporidiosis, E.coli O157:H7 and Shiga toxin-producing E. coli (STEC), Giardiasis, Influenza-associated hospitalization, Legionnaires' disease, Pertussis, Salmonellosis and Shigellosis.

** Reporting Lag is the difference in days between the date of diagnosis and the date of report.

*** Participant in the FoodCORE program project where ODH conducts interviews of patients with Salmonella, E. coli and Listeria on behalf of the LHD. (All data is provisional and subject to change.)

**** Niles united with Trumbull August 12, 2015.

Red text denotes a decrease from 2015 Quality Indicator Report for the percentage completed/reported and an increase in reporting lag.
