

prescription for prevention: stop the epidemic

Prescription drug abuse and overdose is a growing epidemic throughout the state of Ohio.

Each day, **five Ohioans** die on average because of unintentional drug overdose.¹

In Ohio, since 2007, there have been more deaths from drug overdose than from motor vehicle traffic crashes.¹

- In 1999, there were 327 unintentional drug overdose deaths in Ohio. In 2012, that number had risen to 1,914 deaths, an increase of 485 percent.¹

Prescription pain relievers (prescription opioids) have been associated with more overdose deaths in Ohio than heroin and cocaine combined over the past six years (2007 – 2012).¹

- In 2012, there was an average of 67 doses of prescription opioids dispensed for every Ohio resident.²

Help end prescription drug abuse. Talk to friends, teens and family members about the dangers of taking medication without a prescription or sharing prescription drugs, and the highly addictive nature of these drugs.

the most commonly misused drugs

Take a look in your medicine cabinet. You may be housing some of the most commonly misused or abused prescription drugs.

If any of these drugs are in your medicine cabinet, it may be time to make sure you know how to properly store and dispose of them to prevent possible misuse.

clear out your cabinet:

getting rid of unneeded prescription drugs

A recent national study found that 60 percent of people aged 18 and older obtained prescription pain relievers free from family members or friends for nonmedical use.³

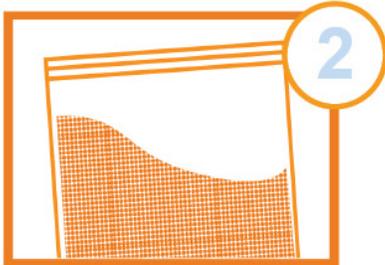

Although it may seem wasteful to dispose of costly prescription medication, properly disposing of unneeded or old medication is one way to prevent prescription drug abuse among your family and friends.

Read the specific disposal instructions that came with your medication. A few medicines should be flushed down the sink or toilet, if they cannot be disposed of through a take-back program, because they may be harmful or even fatal if used by someone else. A list of medicines recommended for disposal by flushing can be found on the FDA's website: <http://www.fda.gov>. Enter "safe disposal of medication" in the search box.

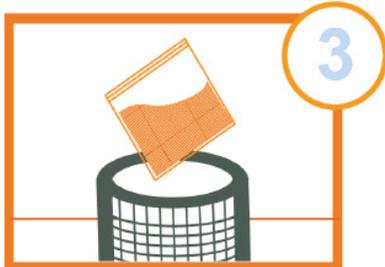

Not sure how to clear out your cabinet? You may be able to take advantage of drug take-back events in your community that collect unused prescription drugs for proper disposal, or you can use the easy guide below.

Take unneeded medication out of the original container and mix it with garbage, coffee grounds, cat litter or sawdust.

Place mixture in a disposable container, such as a sealable plastic bag.

Place sealed container in the trash.

Remove all personal information from empty medicine bottle and dispose of the bottle.
